Environmental and Sustainability Policy Statement

APPROVED BY THE BOARD AND CO-FOUNDERS

EXTERNAL POLICY | EX-08 | VERSION 1.0

22 OCTOBER 2026

Environmental and Sustainability Policy Statement

EXTERNAL / CORPORATE GOVERNANCE / VERSION 1.0

DOCUMENT CODE	EX-08
POLICY OWNER	Leadership / Operations
STATUS	Approved — Board and both co-founders
REVIEW	At least annually and after material change

01 Purpose

This statement sets out the environmental principles for Omniscient's offices, digital infrastructure, engineering and supplier activity. This policy establishes minimum requirements and accountability for environmental and sustainability policy statement across Omniscient Industries Limited ("Omniscient"). Its requirements apply proportionately to the activity, risk and applicable law. Implementation and compliance must be supported by appropriate operational evidence.

02 Application

This approved policy governs the stated public or third-party commitments. External publication must accurately reflect the company's relevant services and actual operating arrangements. Contractual and statutory requirements take priority; any customer-specific terms or product documentation continue to apply where relevant.

03 Policy requirements

3.1 Legal compliance and prevention

- Identify applicable environmental obligations for premises, equipment, testing, procurement, batteries and waste streams.
- Prevent pollution, handle electronics and hazardous waste through appropriate channels and respond promptly to environmental incidents.
- Consider resource and energy consumption when designing products, choosing hosting and selecting suppliers.

3.2 Practical improvements

- Prefer durable and repairable components where feasible and assess material use across prototyping, testing and disposal.
- Reduce avoidable travel and office consumption while preserving safety, service quality and operational requirements.
- Document a small number of measurable objectives and review actual evidence before stating achievements publicly.

3.3 Supply chain and reporting

- Ask relevant suppliers for environmental controls and responsible waste-management evidence proportional to risk.
- Any carbon, net-zero or recycled-content claims must state boundaries, method and supporting data; invented targets are prohibited.
- Material environmental issues are escalated to management and incorporated into corrective actions.

3.4 Leadership oversight

- Assign an owner and review environmental risks at least annually and upon major changes in activities.
- Keep records of permits, waste transfer documents and relevant monitoring where legally or contractually required.
- Staff should be able to raise an environmental concern without fear of retaliation.

04 Responsibility and escalation

The policy owner is Leadership / Operations. The responsible executive sponsor must ensure that this policy is translated into working arrangements, that relevant teams understand their duties and that material concerns are considered without unnecessary delay. Business partners should use their nominated Omniscient contact to raise questions; serious suspected misconduct or safety and security risks should be escalated urgently.

05 Evidence, assurance and improvement

The owner should establish practical records, risk reviews, approvals and corrective actions needed to demonstrate application of this policy. Evidence should be proportionate to the risk, handled according to the information classification and retention policies, and reviewed after significant incidents or regulatory change. Do not state that a control, certification, audit or training programme has been completed without supporting evidence.

06 Review, exceptions and approval

This policy has been approved by the Board and both co-founders. Publication and implementation must remain accurate to actual company operations. Changes must be version controlled, and material updates communicated to affected audiences.

6.1 Publication or implementation condition

Do not assert net-zero targets, ISO 14001 certification or measured reductions without evidence.
